TO THE OWNER

A WORD FROM HAGIE MANUFACTURING COMPANY

Congratulations on your selection of a Hagie Model STS 10 SPRAYER/DETASSELER. This operator's manual supplement is not intended to stand alone as an operating manual for the STS 10 SPRAYER/DETASSELER, but is considered an additional support publication for your STS 10 Operator's Manual to encompass the detasseling options. We recommend that you study your STS 10 Operator's Manual along with this supplement and become acquainted with the adjustments and operating procedures before attempting to operate your new sprayer/detasseler. As with any piece of equipment, certain operating procedures, service, and maintenance are required to keep it in top running condition.

We have attempted herein to cover all of the adjustments required to fit varying conditions. However, there may be times when special care must be considered.

Hagie Manufacturing Company reserves the right to make changes in the design and material of any subsequent sprayer/detasseler without obligation to existing units.

We thank you for choosing a Hagie SPRAYER/DETASSELER and assure you of our continued interest in its satisfactory operation for you. If we might be of assistance to you, please call us.

We are proud to have you as a customer.

CAUTION

READ OPERATOR'S MANUAL. BE ALERT. LEARN TO OPERATE THIS MACHINE SAFELY. OBSERVE ALL SAFETY PRACTICES. MACHINES CAN BE HAZARDOUS IN THE HANDS OF AN UNFAMILIAR, UNTRAINED, OR COMPLACENT OPERATOR. SHUT OFF ENGINE BEFORE SERVICING. WHEN MECHANISM BECOMES CLOGGED, SHUT OFF ENGINE BEFORE CLEANING. DON'T RISK INJURY OR DEATH.

TO THE OPERATOR

The following pages and illustrations will help you operate and service your new sprayer/detasseler. It is the responsibility of the user to read the operator's manual and comply with the safe correct operating procedures and lubricate and maintain the product according to the maintenance schedule.

The user is responsible for inspecting the machine and having parts repaired or replaced

when continued use of the product causes damage or excessive wear to other parts.

Keep this manual in a convenient place for easy reference when problems arise. This manual is considered a permanent fixture with this machine. In the event of resale, this manual should accompany the sprayer/detasseler. If you do not understand any part of the manual or require additional information or service, contact the Hagie

Hagie Manufacturing Company
Box 273, Clarion, IA 50525
(515) 532-2861

The following symbols, found throughout this manual, alert you to potentially dangerous conditions to the operator, service personnel, or the equipment.

This symbol indicates an immanently hazardous situation which, if not avoided, will result in death or serious injury.

This symbol indicates a potentially hazardous situation which, if not avoided, could result in death or injury.

This symbol indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe

I. SAFETY/DECALS

SAFETY PRECAUTIONS

Most accidents occur as the result of failure to follow simple and fundamental safety rules. For this reason, most accidents can be prevented by recognizing the real cause and doing something about it before the accident occurs.

Many conditions cannot be completely safeguarded against without interfering with efficient operation and/or reasonable accessibility.

Therefore, you must study your STS 10 Operator's Manual along with this supplementary manual and learn how to use the sprayer/detasseler controls for safe operation. Likewise, do not let anyone operate without instruction.

Do not make modifications such as weldments, add-ons, adaptations, or changes from the original design of detasseler. Such changes

OUTRIGGERS

- Make sure the outriggers are locked down either when folded in or folded out.

GENERAL OPERATION SAFETY

- If equipped with light sensing depth units, do not look directly into light beam. It emits a very low intensity microwave signal which may cause possible eye damage.
- Never allow walking personnel in the same field as a detasseler.

I. SAFETY/DECALS

WARNING DECALS

Decals warning you of avoidable danger are located on various parts of the sprayer/detasseler. They are there for your personal safety and protection. DO NOT remove them. They will fracture upon attempted removal and therefore must be replaced.

Following are locations of important safety

decals not shown in your STS 10 Operator's Manual. Replace them if they are torn or missing. All warning decals and other instructional Hagie decals or machine striping may be purchased through the Hagie Customer Support Department.

To replace decals, be sure that the installation area is clean and dry; decide on exact position before

650820

Quad puller head.

650820

2 on each male corn chopper.

650955

Near motor control box on right cab glass.

II. PREPARING TO OPERATE

REMOVING SPRAY BOOMS

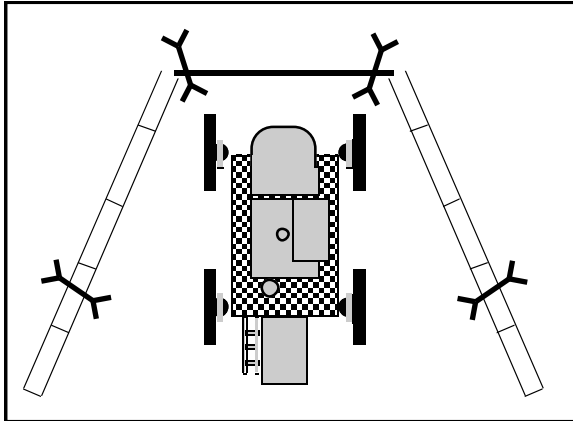

FIG 2.1

FIG 2.2

FIG 2.3

Park the sprayer on level ground and set the parking brake. To prepare the booms for removal, lift the booms out of the boom cradle, leaving the extensions folded in. Fold them out enough to clear the tractor when lowered. Lower the booms onto heavy-duty stands, supporting them in at least four places (fig. 2.1).

Disconnect solution supply quick-couples, foamer supply quick-couples and lift arm plate mounting bolts (item 2.2, 16 total).

After removing all 16 mounting bolts, with the booms resting on all four support stands, depress the lower transom button (fig. 2.3, item 2). This will cause the lift arm plate to raise. Continue pressing the button until the quick-attach "hook" has cleared the "quick-attach" pin (fig. 2.3, item 1 & 3).

Disconnect hydraulic breakaway hose quick-coupling. Cap each coupling after disconnection to prevent contamination of hydraulic circuit. Disconnect hydraulic supply to and return hose from boom control valve. Cap the hose coupling that stay with the boom. Connect the male and female hoses still on the tractor to each other until mounting the detaseling bar.

II. PREPARING TO OPERATE

Wiring Tasselrol[®]/LS and Depth Command

Attach Tasselrol[®], Depth Command and other wire harnesses to the appropriate “jumper” ports located in front of the cab (fig. 2.4). Refer to also to STS 10 SPRAYER/DETASSELER Parts Manual

for proper wiring schematics.

All “jumper” ports not used should be “capped” (fig. 2.4, items 1) to protect connection points.

FIG 2.4

III. OPERATING INFORMATION

Detasseling Heads

The hydraulic motors on the detasseling heads (fig. 3.2) are turned on and off with a row of switches mounted on the control box to the right of the operator's seat (fig. 3.1). To activate the motors, depress the front or top of the corresponding switch(es). To shut any or all motors off, depress the back or bottom of the corresponding switch(es).

Each motor control valve contains a .182 inch orifice disc that restricts hydraulic flow to the hydraulic motors so they don't overspeed and become damaged.

Activate hydraulic motors while engine speed is at an idle, then increase engine RPM to operating speed.

FIG 3.1

CAUTION

BEFORE ENGAGING HYDRAULIC MOTORS

1. REDUCE ENGINE SPEED TO AN IDLE
2. CLEAR AREA OF UNAUTHORIZED PERSONNEL

FIG 3.2

CAUTION

DO NOT operate the hydraulic motors on detasseling heads without .182 inch orifices in place under each solenoid coil.

III. OPERATING INFORMATION

SETTING UP THE TASSELTROL®/LS SYSTEM

FIG 3.3

The control box (fig. 3.3) has three programmable parameters and each has four different value settings. Your programmable control box is factory preset with the following parameter defaults:

BOTTOM PARAMETER – B1 See page 15 to reprogram the bottom parameter.

RESPONSE PARAMETER – R2 See page 13 to reprogram the response parameter.

TOP PARAMETER – T3 See page 14 to reprogram the top parameter.

These parameters will always be displayed until the control box is reprogrammed. Once reprogrammed, the values for the parameters will appear in the window of the control box. The new parameters will maintain their value for approximately a two week period. If the unit is not used within this time frame, the parameters will automatically return to the normal settings.

To program the unit, first select the response parameter (page 13). If further adjustment is required for top and/or bottom parameters, see pages 14 and 15.

III. OPERATING INFORMATION

OPERATING THE TASSELTROL®/LS CONTROL

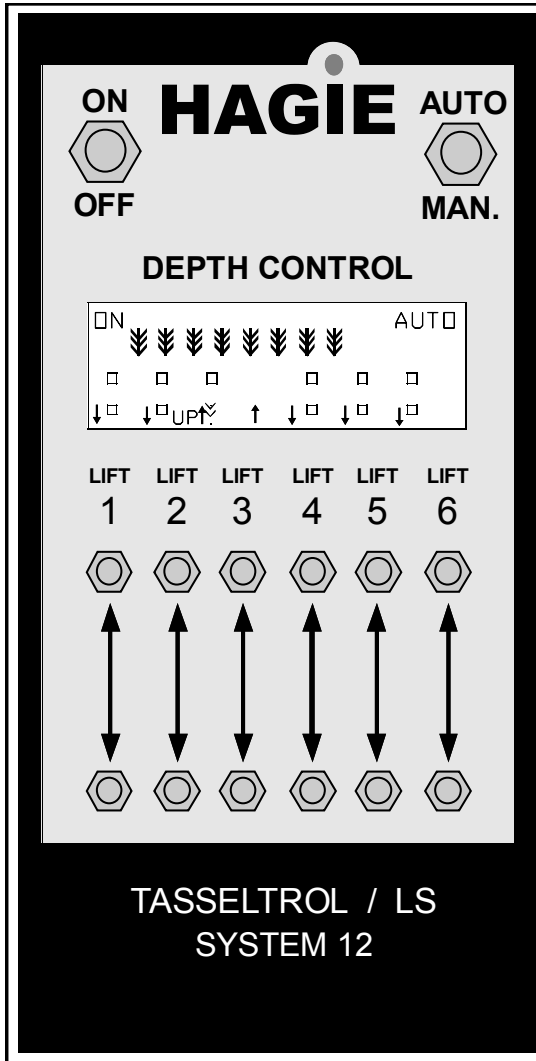

FIG 3.4

To use the control box with its normal parameter setting, use the following procedures. To adjust the given parameters, see pages 13-15.

1. From the operator's seat, turn the ignition to the "ON" position.
2. Turn the control box power switch to the "ON" position.
3. Turn the "AUTO/MANUAL" switch to "MANUAL." At this time the display will read "MANUAL" in addition to other information identifying the control box.
4. Press the individual row switches for up and down movement. An arrow in the display will indicate direction of each lift assembly. "P" indicates pressure - "UP" only.
5. If the "AUTO/MANUAL" switch is left in the "AUTO" position when the unit is first started, the display will tell you to select "MANUAL." After you have selected "MANUAL" switch back to the "AUTO" position.
6. To raise and hold one or more units during operation, press the desired "UP" switch, select "MANUAL" and back to "AUTO." This will hold the unit up in position. To re-activate the lift, switch to "MANUAL" and back to "AUTO."
7. To override the system, press the desired "UP" switch to raise the attachment. When the switch is released, the system will go back into the "AUTO" mode.
8. If the ignition is left on and the "AUTO/MANUAL" switch is left in the "AUTO" position, the down coils on the electro-hydraulic valve will lose power after 45 seconds. To re-activate, move the "AUTO/MANUAL" switch from "AUTO" to "MANUAL" and back to "AUTO."
9. The control box is set up with a feature so that if a unit loses contact during operation in the "AUTO" mode, the unit will automatically rise. If this should happen, switch to the "MANUAL" mode and determine the cause for malfunction.

III. OPERATING INFORMATION

FIG 3.5

“ALL UP” and “ALL HOLD”

This function can be used to raise or lower all row units at the same time. The switches to control this option are located on the hydrostat control handle (fig. 3.5). All the row units will move up when the switch is pressed upward and will lower when the switch is pressed downward.

The parameters for dwell on the up move can be set to 0, 5, 10, 15, 20, or 25 seconds. The heads will move up in this amount of time without having to hold the switch up. All heads will hold this position when the parameter is reached. To resume automatic depth control, press the switch down.

To program the “ALL UP” and “ALL HOLD” function:

1. Put the “AUTO/MANUAL” switch to “AUTO.”
2. Put the “ON/OFF” switch to “ON.”
3. Press the “UP” button under “PAR”.
4. Press the “UP” button under “D” to set the dwell time.
5. After selecting one of the dwell time choices, press any of the down switches.
6. To escape the parameter mode, press down a second time to return to the original screen. To save the information switch the “AUTO/MANUAL” toggle to “MANUAL”.

FIG 3.6

III. OPERATING INFORMATION

TASSELTROL® RESPONSE PARAMETER

The response parameter is used to adjust the response time of both photocells. How quickly the down motion starts when no corn is detected by either the top or bottom cells, and how quickly the up motion is stopped when corn is no longer detected by the top cell, can be changed by selecting R1, R2, R3, or R4. More corrections will occur with R1 selected, and fewer corrections with R4 selected. The normal or default value for this parameter is R2, but can be set to any desired value.

Use the response parameter to adjust overall correction activity and to compensate for ground speed. If the pullers are moving too quickly and frequently, the response parameter can be increased toward R4. If the pullers are too slow to respond to changes in the corn depth, increase the parameters

toward R1. Generally this parameter can be left at R2.

To display the response parameter, select "AUTO" and turn the control box power on. Wait three seconds for the "SELECT MANUAL" message, press the "UP" button under "PAR". Now press the "UP" button under the "R" value.

The active value of the parameter is indicated by it blinking on and off, while the other three choices are displayed continuously.

To select a new value for the parameter, press the "UP" button under the desired choice.

After selecting one of the four choices, press any of the "DOWN" buttons to escape this parameter.

To save new values and escape the parameter mode, press "DOWN" a second time and switch "AUTO/MANUAL" toggle to "MANUAL."

FIG 3.7

NOTE:
See page 17 for more information regarding the LS photolights.

WARRANTY SHOOTING MAINTENANCE

III. OPERATING INFORMATION

TASSELTROL[®] TOP PARAMETER

The top parameter is used to adjust the sensitivity of the top photocell. The top photocell starts the up motion when its lights path is blocked by corn. How much corn it has to see before starting the up move can be changed by selecting one of the four values T1, T2, T3, or T4. With T1 selected, more corn is required to start an up move. The normal or default value for this parameter is T3, but can be set to any desired value.

If the pullers move up too easily when a taller stalk of corn passes, increase the parameter toward T4. If the pullers stay deep too long when taller corn passes, decrease the parameter toward T1. Generally this parameter can be left at T3.

To display the top parameter, select "AUTO" and turn the control box power on. Wait three sec-

onds for the "SELECT MANUAL" message. Press the "UP" button under "PAR". Now press the "UP" button under the "T" value.

The active value of the parameter is indicated by it blinking on and off, while the other three choices are displayed continuously.

To select a new value for the parameter, press the "UP" button under the desired choice.

After selecting one of the four choices, press any of the "DOWN" buttons to escape this parameter.

To save new values and escape the parameter mode, press "DOWN" a second time and switch "AUTO/MANUAL" toggle to "MANUAL."

FIG 3.8

NOTE:
See page 17 for more information regarding the LS photolights.

III. OPERATING INFORMATION

TASSELTROL® BOTTOM PARAMETER

The bottom parameter is used to adjust the sensitivity of the bottom photocell. The bottom photocell stops the down motion when its light is blocked by corn. How much corn it has to see before stopping the down move can be changed by selecting one of the four values B1, B2, B3, or B4. With B1 selected the down move will stop as soon as corn is detected. With B4 selected the down move will continue a little longer. The normal or default value for this parameter is B1, but can be set to any desired value.

If the pullers run too shallow after moving down into shorter corn, increase the parameter toward T4. If the pullers move too deep when going into shorter corn or oscillate between the top and bot-

tom photocells, decrease the parameter toward B1. Generally this parameter can be left at B1.

To display the bottom parameter, select "AUTO" and turn the control box power on. Wait three seconds for the "SELECT MANUAL" message. Press the "UP" button under "PAR". Now press the "UP" button under the "B" value.

The active value of the parameter is indicated by it blinking on and off, while the other three choices are displayed continuously.

To select a new value for the parameter, press the "UP" button under the desired choice.

After selecting one of the four choices, press any of the "DOWN" buttons to escape this parameter.

To save new values and escape the parameter mode, press "DOWN" a second time and switch "AUTO/MANUAL" toggle to "MANUAL."

III. OPERATING INFORMATION

LS PHOTOLIGHT INDICATORS

FIG 3.10

The upper and lower LS photolights (fig. 3.10) have L.E.D. lights (fig. 3.11) that indicate their operational status.

LT/DK SWITCH – Light/Dark switch on photolight (fig. 3.11, item 1) changes the activated condition of green L.E.D. (see below) from *ON* (“LT”) to *OFF* (“DK”). Switch does not affect the functional operation of the light, only how it is displayed. Switch should be set to “LT”.

SENSITIVITY ADJUSTMENT SCREW – Sensitivity adjustment screw (fig. 3.11, item 2) should always be set to maximum.

YELLOW L.E.D. – Yellow L.E.D. (fig. 3.11, item 3) indicates power on.

GREEN L.E.D. – Green L.E.D. (fig. 3.11, item 4) indicates output energized (sending a signal to Tassel-tron[®] box, opening the raise or lower stack valve).

RED L.E.D. – Red L.E.D. (fig. 3.11, item 5) indicates photolight is receiving reflected signal.

FIG 3.11

III. OPERATING INFORMATION

DEPTH COMMAND

FIG 3.12

FIG 3.13

The Hagie STS 10 sprayer/detasseler combo comes available with optional adjustable DEPTH COMMAND (fig. 3.12). This allows the operator to adjust the depth of the LS system from the cab (fig. 3.13).

To lower the cutting or pulling height, select the appropriate switch and push down. This will extend the actuator (fig. 3.12, item 1), raising the LS system, which in turn lowers the cutting or pulling height. To raise the cutting height, lower the actuator by pushing the appropriate switch up.

NOTE:

DO NOT operate more than two actuators at one single time. This may blow the fuse located on the switch panel. For more information on the DEPTH COMMAND fuse, see page 21.

IV. SERVICE AND MAINTENANCE

FILTERS

Return Filter

Remove and install a new 10 Micron rated return filter (fig. 5.1) at the end of the first 50 hours of use; subsequently, replace the filter every 250 hours, or once a year, whichever comes first.

FIG 4.1

High Pressure In-line Filter

OUTRIGGER FOLD VALVES - The valves on the outrigger fold valve are protected by a 90 Micron in-line sintered bronze filter (fig. 4.2).

LIFTARM STACK VALVES - The valves on the lift control stack valve are protected by a 90 Micron in-line sintered bronze filter (fig. 4.3).

When the filter elements are removed for cleaning, caution should be taken so the gasket is in the proper place when re-installing (fig. 4.4). Also, re-install filters paying attention to direction of flow so the ends marked "OUT" are oriented correctly.

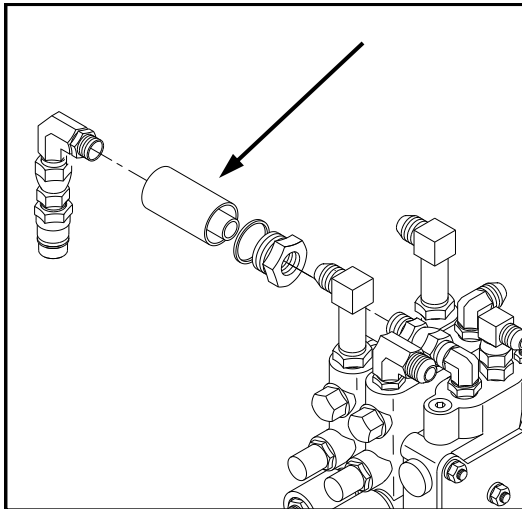

FIG 4.2

FIG 4.3

FIG 4.4

IV. SERVICE AND MAINTENANCE

FIG 4.5

LUBRICATION

Quad Pullers

Each quad puller head has four bearings equipped with grease zerks (fig. 4.5). To ensure the longest life and best performance, grease each bearing twice a day: suggested times are morning and noon.

Male Row Choppers

Each male row chopper has two bearings equipped with grease zerks (fig. 4.6). Grease each bearing once a day.

FIG 4.6

Four Blade Male Row Cutters

Grease both upper (fig. 4.7, item 1) and lower (fig. 4.7, item 2) shaft bearings 4 times a day. Suggested times are morning, mid-morning, noon, and mid-afternoon.

FIG 4.7

IV. SERVICE AND MAINTENANCE

FIG 4.8

FIG 4.9

FIG 4.10

Electrical System

MOTOR CONTROL FUSE – The fuse for the DEPTH COMMAND is located in the switch box (fig. 4.8). If the DEPTH COMMAND fuse blows, remove it by rotating the fuse cap counter-clockwise as you push in. Then pull the fuse straight out. Replace the blown fuse with the same amperage fuse only (fig. 4.9). If the fuse continues to blow, determine the cause and correct it.

Operating more than two actuators at one time may cause the fuse to blow (see page 18). A blown fuse may indicate that the LS/DEPTH COMMAND pivot bolts (fig. 4.10) are torqued too tight. If the fuse continues to blow, determine cause and correct it.

▶ TASSELTROL®/LS SYSTEM – ELECTRICAL CONTINUED

TASSELTROL® DISPLAY TROUBLESHOOTING

To gain further information on the status of the Tasselrol®/LS system before operation: while sitting in the operator’s seat, turn the ignition key to the “ON” position (do not start the engine); turn the Tasselrol® box to the “ON” position; turn the “AUTO/MANUAL” switch to “MANUAL.”

Make sure there is nothing physically blocking any upper or lower sensor’s path to its reflector.

The display will show the status of the upper and lower photo sensor on each lift assembly. If the display shows a box (“□”) in all upper and lower areas, the unit is ready for operation. If the display shows a corn stalk (“Ÿ”) in one or more areas, refer to pages 26-27 for further suggested remedies.

The LEFT-CENTER sensors are used as examples.

TASSELTROL® DISPLAY

PHOTO SENSOR STATUS LIGHTS	POSSIBLE CAUSE
Lights at both photo sensors	Photo sensors not in line with reflector
No lights at either photo sensor	Faulty connector cable (See page 31, fig. 5.1, item 2) Faulty RED and/or BLACK wire in connector cable (See page 31, fig. 5.1, item 1)

V. TROUBLE SHOOTING

TASSELTROL® DISPLAY

Unit does NOT rise automatically.

PHOTO SENSOR STATUS LIGHTS	POSSIBLE CAUSE
Lights at lower photo sensor	<p>Faulty GREEN wire in connector cable (See page 31, fig. 5.1, item 2)</p> <p>Photo sensor not in line with reflector</p> <p>Faulty BLUE wire in sensor assembly (See page 31, fig. 5.1, item 1)</p>
No lights at lower photo sensor	<p>Faulty RED and/or BLACK wire in connector cable (See page 31, fig. 5.1, item 2)</p>

NOTES

VI. LIMITED WARRANTY

1. The Warranty

- a. This warranty gives you specific legal rights. You may also have other rights which may vary from state to state.
- b. Hagie makes this warranty only to the original purchaser of its new equipment.
- c. The warranty period ends 12 months from the date of delivery of equipment to the original purchaser. When requesting warranty service, the original purchaser must present evidence of the date of delivery of the equipment.
- d. Parts or rebuilt assemblies furnished under the terms of this warranty are not warranted beyond the original warranty period.
- e. Exceptions to this warranty must be covered by separate warranty agreements.

2. Items not covered by Hagie Warranty

- a. Used equipment.
- b. Tires, tubes, engines, and batteries (under separate manufacturer's warranty).
- c. Depreciation or damage caused by normal wear, accident, improper maintenance, improper storage, or improper use.
- d. Service calls and transporting the equipment to and from the place where the warranty work is performed.

3. Unapproved service or modification

NOTE:
All obligations of Hagie Manufacturing Company under this warranty shall be terminated if:
a. . . . service is performed by someone other than Hagie authorized personnel.
or
b. . . . the equipment is modified or altered without Hagie approval.

4. No commercial loss coverage

- a. Hagie shall not be liable for incidental or consequential damages or injuries (damage and repairs of equipment itself, loss of profits, rental or substitute equipment, loss of good will, etc.).
- b. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

5. Merger clause

- a. The entire warranty agreement is included in this writing.
- b. Any oral agreements that are made by the selling persons about the equipment are not warranties, and are not to be relied upon by the purchaser.

6. No representations or implied warranty

- a. The parties agree that the implied warranties of merchantability and fitness for a particular purpose and all other warranties expressed or implied, are excluded from this transaction and shall not apply to the equipment sold.
